Global and national news, uncompromising documentaries and diverse cultural programs, connecting you to the world...

World Music: Best of 2007
The Link TV music programming team presents a special compilation of the best videos that found their way onto the channel this year, and into our hearts.

CINEMONDO: Cinema, Aspirins and Vultures
An moving film about two men who travel from the US to Mexico to buy "vultures" selling aspirins, a new "miracle drug". Then one finds out he must either return to his home in Germany, or enter a local concentration camp.

MIR: 2007
From Saddam Hussein's execution to Iran's nuclear program, 2007 has been a year of history-making events in the Middle East. What were the surprises of the year? And will peace prevail in 2008? The answers to...

SGI® InfiniteStorage SAN Solutions

Datasheet PDF Price: Ask a Sales Rep

Overview

Unlike other Storage Area Network (SAN) "solutions" available in the market, SGI SAN Servers provide not only disk storage and a SAN interface, but also robust data sharing available with SGI® InfiniteStorage Shared Filesystem. SGI InfiniteStorage SAN 2000, SGI® InfiniteStorage SAN 3000 and SGI® InfiniteStorage RM610 models give all connected systems instant access to the same data at the same time, reducing data access wait time, and removing the cost and complexity of managing multiple storage units.

Solutions suitable for any purpose

SGI SAN Servers offer the performance benefits of SAN and the convenience of a high-performance file serving to non-SAN-connected systems.

InfiniteStorage SAN 2000

InfiniteStorage SAN 2000 is the entry-level system, offering an economical SAN solution CXFS.

InfiniteStorage SAN 3000

InfiniteStorage SAN 3000 offers the highest performance available, combining high performance storage and infrastructure components for shared data access.

SGI also offers a complete line of SAN Infrastructure solutions including:

- SAN Management
- Data Lifecycle Management
- Data Protection

Customer Successes

Press Releases

Partners

Supports mixed and legacy systems

With the SGI® Open Storage initiative, InfiniteStorage SAN Gateway provides a smooth transition from legacy storage hardware investment, with support of SGI, non-SGI and non-Open Storage environments.

SAN management

SGI management and storage resource management (SRM) encompasses the following features:

- Understanding what resources you have on your SAN and how they are used
- Monitoring and managing SAN performance and availability
- Managing SAN storage capacity and utilization
- Providing centralized management of multiple SAN environments

Data Migration Facility

Datasheet PDF Price: Ask a Sales Rep

Overview

In the typical data life cycle, new data is accessed intensively. As data ages, it is accessed less frequently and may remain dormant for many months or even years, although it may occasionally undergo brief periods of renewed intense access. SGI helps customers flexibly and economically adapt to changing data access patterns with SGI InfiniteStorage Data Migration Facility.

DMF

DMF transparently migrates files from online storage to near-line storage based on user-defined criteria such as time of last access. Without DMF, the only choice most sites have is to either maintain a huge pool of inactive data on expensive disk storage or manually archive that data to tape, where it is difficult or impossible to access.

With DMF,

- a nearly infinite data store can be cost-effectively maintained and managed without sacrificing accessibility.
- All data is transparently recalled to primary storage when accessed, so users never need to know where the data resides. Many SGI customers are already using DMF to manage over a petabyte of data with no end in sight.

Hosted on either IRIX or Linux systems, DMF can also be used in conjunction with SGI InfiniteStorage NAS and SAN solutions to provide transparent data lifecycle management services across Windows®, Mac OS® X, Linux® and Unix® environments to transparently access data on multiple tiers of storage.

Features:

- Lower TCO with Reduced Cost of Capacity and Administration
- Increase ROI with Higher Data Access and Productivity
- Optimize Data Management and Control
- Reduce Risk to Data Retention and Accountability
- Protect Investment with Infinite Scalability
- Integrate Seamlessly with Consolidation and Data Protection

SGI® InfiniteStorage 350

Affordable High-density Storage

Datasheet PDF Price: Ask a Sales Rep

Overview

The SGI InfiniteStorage 350 is a SATA-only storage system that delivers high density and performance typically found only in enterprise class storage systems. It is designed for environments that previously relied on distributed Direct Attached Storage (DAS) and now require a single easy-to-manage system. For environments with more complex requirements, the 350 is a building block for data lifecycle management, disk to disk backup and other applications.

Highlights

- Value-priced, high capacity SATA RAID
- Dual integrated controllers
- 4 Gb fibre channel connectivity
- BTB in a compact 3U enclosure

Features and Benefits

- Superior performance
- High-density and low-cost capacity
- Rock-solid reliability and availability
- Lower total costs

Resource Manager

SGI® SAN Management and Storage Resource Management Solutions

Simplify Storage Network Management

To help you reduce the operational costs of managing your SGI InfiniteStorage solutions, as well as your heterogeneous SAN, NAS, and DAS resources, and to improve the performance, availability and utilization of your SAN-hosted applications, SGI offers the industry's leading storage area management solutions through an alliance with AppIQ.

SGI InfiniteStorage Resource Manager

In September 2003, SGI and AppIQ announced a strategic alliance that has resulted in SGI bundling components of AppIQ's SAN management technology with SGI InfiniteStorage SAN solutions. SGI InfiniteStorage Resource Manager provides comprehensive, standards-based management of the SGI InfiniteStorage solution set, including CXFS, IRIX®, Altix®, Brocade®

DVD Covers
for Tiger Eye Claw

Qi Gong is the ancient art of training the mind to direct Ch'i or energy flow, throughout the body.

Designed for both beginner and long time student, the techniques, posture control, and relaxation exercises work to cleanse and rejuvenate the body and immune system.

Practiced for centuries in Tibet and China, today's Qi Gong was drawn from the accumulated wisdom and power of both Taoist and Buddhist disciplines.

Now Master Ron Lew brings this ancient art to DVD. He has been teaching Martial arts for over 40 years. He founded the Tiger Eye Claw Center, one of San Jose's oldest martial art schools. Ron has conducted seminars and workshops throughout California, Hawaii, New Mexico and Germany.

Let Master Lew help you learn these powerful methods to increase your:

- Mental and physical strength
- Endurance and flexibility
- Ability to handle stress

Each session includes:

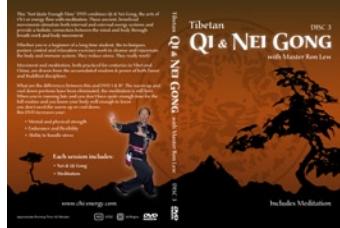

- Warm up
- Cool down
- Qi Gong
- Meditation

Tibetan QI GONG with Master Ron Lew DISC 1

DVD cover for
Mel Bay
Publications

Douglas Niedt began his study of the guitar at age seven and polished his playing to gem-like brilliance through his studies at the Juilliard School, the Segovia Master Classes in Spain, and with Narciso Yepes, Christopher Parkening, Jorge Morel, and Oscar Ghiglia. At age seventeen, international recognition followed his first prize sweep of the first Chet Atkins International Guitar Competition in which three hundred guitarists were entered. At age twenty-one, Douglas made his New York debut in Carnegie Recital Hall. After his debut the New York Times declared, "There was no doubt that he was a gifted performer. His playing was highly colored, his pitch exact, his phrasing precise." Douglas has shared billing on concert series with such prestigious guitarists as Julian Bream, John Williams, and Christopher Parkening. Douglas was honored with a solo fellowship from the National Endowment for the Arts. He is chairman of the guitar department at the Conservatory of Music, University of Missouri, in Kansas City.

Mel Bay is proud to present, American virtuoso, Douglas Niedt.

NEC NEC Solutions America

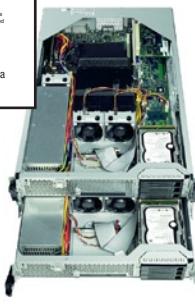

AMBLE INTERNAL AND EXTERNAL STORAGE CAPACITY

The Express5800/320Ma provides ample storage internally with three logical Enterprise SATA drive bays for a combined maximum capacity of 1.2TB (with the use of 400GB hard disk drives). If more storage is required, the Express5800/320Ma can be connected to a variety of storage options from NEC and other leading storage providers. NEC's S-Series storage arrays provide up to 5TB of storage and 16GB of cache over 8 fiber channel ports, as well as RAID 6 double-parity technology for greater reliability and performance.

Key Features

- Microsoft Windows Server® 2003 Enterprise Edition and Red Hat Enterprise Linux Advanced Server Single copy of each)
- Dual logical 3.2GHz, 3.6GHz, or dual-core 2.8GHz Intel Xeon processors for high-speed performance
- Active Upgrade for planned software maintenance
- Application monitoring and automatic restarting via ExpressCluster SRE
- Virtual Technician for extensive remote monitoring
- Compact 4U footprint saves space in either rackmount or tower configuration
- Internal support for up to 1.2TB of enterprise class SATA storage
- Simplified disaster recovery between FT servers over LAN or WAN

NEC NEC Solutions America

*Subject to Availability in August 2005

JobCenter Supported Platforms

JobCenter MG/SV	UNIX	HP-UX 11.0, 11i, 11iv2 (PA-RISC and Itanium) Solaris 2.6, 7, 8, 9, 10 AIX 4.3, 5.1, 5.2, 5.3 Red Hat Enterprise Linux E52.1, A52.1, E53.0, A53.0, E54.0 Macintosh OS X 1.5
JobCenter CL/Win	Windows	Microsoft Windows 2000 Server Microsoft Windows 2000 Professional Microsoft Windows XP Professional Microsoft Windows Server 2003 Microsoft Windows Server 2003 x64 Edition Microsoft Windows Server 2003 R2 Microsoft Windows Server 2003 R2 x64 Edition

Example JobCenter Configuration

JobCenter supports most high availability clustering systems including ExpressCluster*, Microsoft Cluster Service*, Sun Cluster*, McServiceGuard*, HACMP, and VERITAS Cluster Server*. If cluster software is running, a waiting node will take over job networks, jobs, and job status from an active node when an error occurs, thus ensuring system availability.

Interoperability With Other Monitoring Systems

JobCenter supports most open systems, including Microsoft® Windows® 2000, XP, and 2003, UNIX (HP-UX®, Solaris®, and AIX®), and Linux® (RedHat® and Mandrake). The JobCenter system includes a job manager (JobCenter MG), which builds the job queue and monitors the status of every job at all times. JobCenter also includes a job execution server (JobCenter EV), which runs jobs. Administering JobCenter EV in machine groups makes it possible to consolidate the status of jobs and queues. Also included with the JobCenter system is a console called JobCenter CL/Win, which controls and monitors JobCenter MG and JobCenter EV.

Multi-Platform and Multi-Vendor Support

JobCenter supports most open systems, including Microsoft® Windows® 2000, XP, and 2003, UNIX (HP-UX®, Solaris®, and AIX®), and Linux® (RedHat® and Mandrake). The JobCenter system includes a job manager (JobCenter MG), which builds the job queue and monitors the status of every job at all times. JobCenter also includes a job execution server (JobCenter EV), which runs jobs. Administering JobCenter EV in machine groups makes it possible to consolidate the status of jobs and queues. Also included with the JobCenter system is a console called JobCenter CL/Win, which controls and monitors JobCenter MG and JobCenter EV.

Key Features

- Multi-platform and Multi-vendor environment support for all major platforms, including Windows 2000, XP, 2003, HP-UX, Solaris, AIX, and Linux (Redhat or Mandrake).
- Powerful job execution with pre-scheduled and automatic creation, modification, and monitoring of job networks.
- Centralized monitoring of job status simplifies error correction and workflow monitoring.
- Support for 3rd party products including SAP R/3, SAP BW, WebSAM MCOperations, and HP OpenView.
- Easy to use GUI for creating, modifying, and monitoring job networks.
- Includes job manager, job execution server, and console client (JobCenter MG, JobCenter SV, and JobCenter CL/Win).

*Contact your NEC reseller for further details about third party compatibility.

Workflow Development Cost Reduction

In order to manually program a workflow, all error possibilities must be considered, i.e., what happens if one job fails or goes into contention or is canceled? If the workflow is a simple one, this may be an insignificant issue. When a workflow contains tens of thousands of processes, however, this planning can be a daunting expensive task.

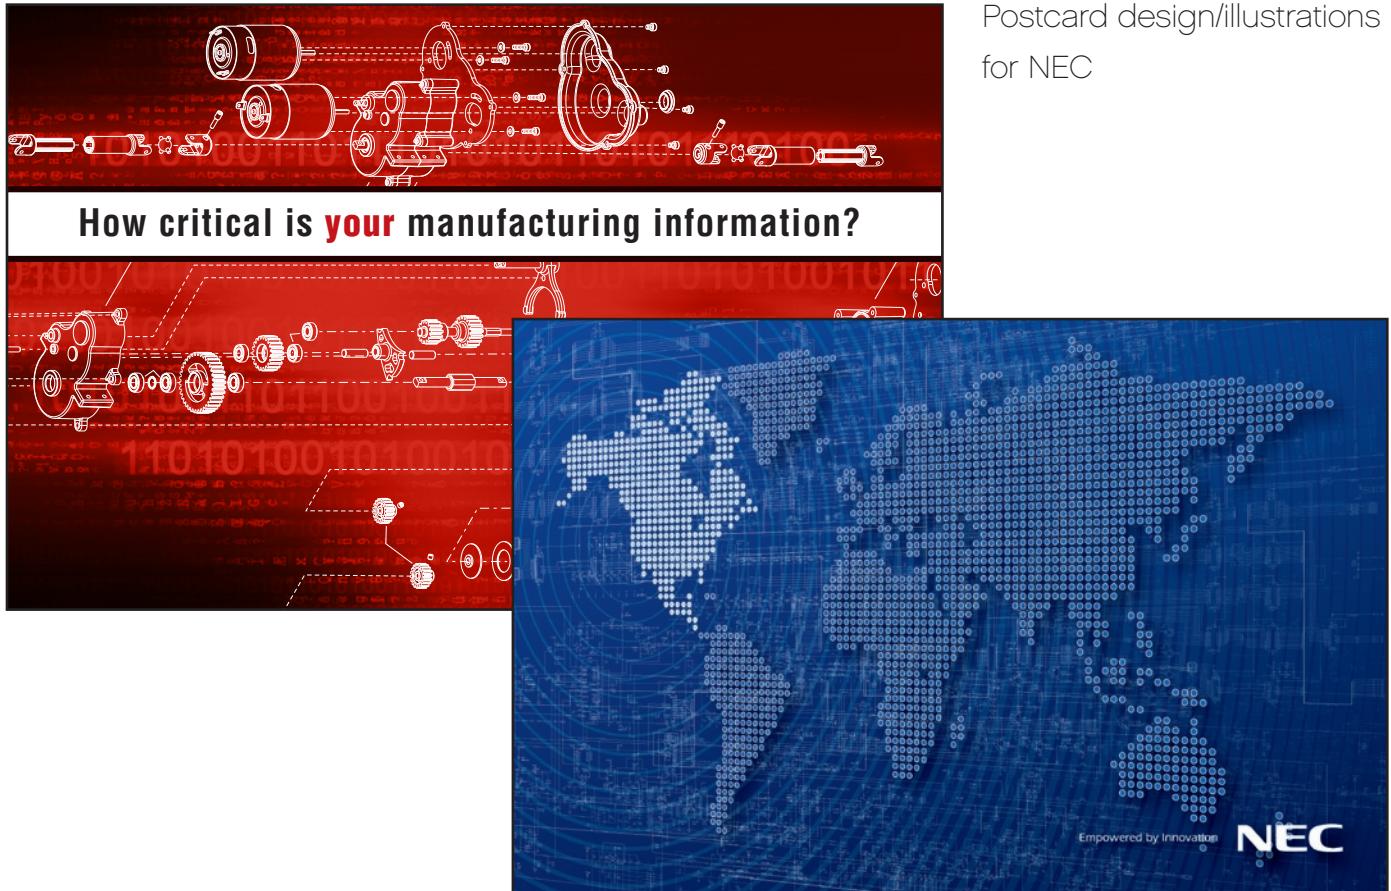

JobCenter easily creates and manages workflows as "job networks." Jobs and control components, which assign processes to specific servers, can be easily programmed using a simple graphical interface. JobCenter separates job network development from job development, meaning jobs can be developed without conflicting with each other, resulting in overall reduction of development time and cost.

Quick Error Correction

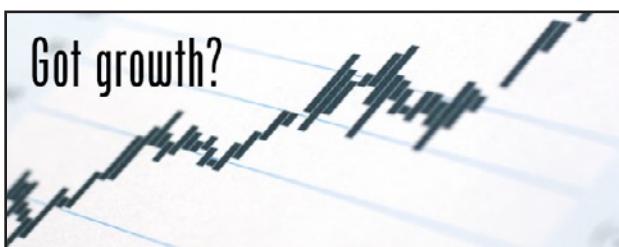

Even when jobs are running according to a schedule, it can cost massive amounts of time and money to recover from errors. JobCenter allows administrators to quickly correct what they encounter. That is, it is important to manage each job in the job networks and monitor the status of every job at all times. JobCenter displays the status and results for each job, enabling administrators to quickly find and eliminate errors, and re-run or cancel jobs as necessary after the problems have been solved.

Automated or Pre-Scheduled Job Execution

JobCenter manages jobs visually on a flow called a "Job Network," making it easy to control and monitor jobs by creating queues and editing job attributes. Within a Job Network, job execution can be automated or scheduled. JobCenter automatically executes jobs based on the specified conditions.

Got growth?

FT Server Sales Incentive Program

- \$100** \$100 to every reseller representative for their first FT server sale.
- \$500** \$500 to the reseller representative who sells the most FT servers by 3/31/06 (Minimum 5 FT servers to qualify).
- \$1000** \$1000 for the reseller (Avnet or Team 1) who sells the most FT servers by 3/31/06 (Minimum 10 FT servers sold to qualify).

Got Growth?

Buy ten, get one free!

For a limited time, if ten or more Fault Tolerant servers are purchased on one purchase order, NEC will provide an eleventh server at no additional charge.*

To get more information on this offer, please visit <http://www.gotgrowth.com>

*11th server will not be shipped until after the 10th unit is delivered. If sold to direct customers, 11th unit will be shipped after all 10 units are paid. 11th unit is base unit only

NEC ND-3500A Quickstart Guide

Drive Installation

- ① Shut down your computer and disconnect all cables plugged into the computer. [Fig. 1]
- ② Remove the computer's case (refer to your computer's documentation).
- ③ Once the cover is removed, touch a non-painted metal surface (i.e. the power supply) to ground yourself. **This is an important step!** You can damage the components inside the computer if you do not ground yourself.
- ④ If you are replacing an existing drive:
Unplug the cables from the rear of the drive. [Fig. 2]
Remove the mounting hardware holding the drive in place (refer to your computer's documentation).
- ⑤ Slide the drive out through the front of the computer. [Fig. 3]
Remove the front cover plate from the empty drive bay where you are installing the drive (refer to your computer's documentation).
- ⑥ Check the jumper settings on the ND-3500A:
If you are replacing an existing drive, set the jumper to the same setting as the drive you are replacing. The jumper is the black plastic piece on the back of your drive bridging two of the six pins as seen below [Fig 4]. You may need small needle nose pliers to gently slide the jumper off.
If you are installing the ND-3500A as an additional drive, you will need to set the jumper settings according to your system requirements (see next page).

Fig. 1
Fig. 2
Fig. 3
Fig. 4

Jumper Setting Tutorial:

There are three possible jumper settings: MASTER, SLAVE, and CABLE SELECT (CSEL). When two drives are connected to the same interface cable, one must be set to MASTER, and one set to SLAVE. Alternatively, both drives may be set to CABLE SELECT, in which case the system defines which drive is MASTER and which drive is SLAVE. If only one drive is present, set the jumper to MASTER. The ND-3500A ships with a default setting of MASTER.

Cable Select (CSEL)
MASTER
SLAVE

If you are installing the ND-3500A as a second drive, look at the jumper settings on the second drive (already in your system). If the settings on that drive are set to MASTER or SLAVE, set the jumper on the ND-3500A to the opposite setting. If the existing drive is set to CABLE SELECT (CSEL), set the jumper on the ND-3500A to CSEL also.

- ⑦ Slide the ND-3500A into the empty drive bay, from the front of the computer. [Fig. 5]
- ⑧ Mount the drive to your computer's chassis using the existing mounting hardware, or the provided screws (refer to your computer's documentation).
- ⑨ Connect the interface cable, making sure the red stripe matches Pin 1 on the drive. If your drive is set to MASTER, connect it to the endmost connector on the cable. [Fig. 6]
- ⑩ Connect the power cable. [Fig. 7]
- ⑪ Replace the computer's cover and re-connect all cables that were previously unplugged.
- ⑫ Power-up the computer.
